SP 95-2-A					
	F IR				
	1.1				
	U.		iatura may diffar from	actual product	
Product No.	• 10001042	Note! Product p	icture may differ from	actual product	
Product No.	. 190019AZ				
Submersible	e borehole pump, suita	ble for pumpin	g clean water. Car	be installed vertically	v or horizontally. All st
components	are made in stainless	steel, EN 1.43	01 (AISI 304), tha	t ensures high corrosi	ve resistance. This pu
	ing water approval.				
The pump is	s fitted with a 7.5 kW M	1S6000 motor v	with sand shield, n	nechanical shaft seal,	water-lubricated journ
mechanical	d a volume compensa stability and high effici	ing diaphragm ency, Suitable	for temperatures i	in to 40 °C.	le motor ollering good
	s fitted with the Grundf	•	•	•	ication together with a
	rol panel, enables tem				ioution together with t
	s for direct-on-line star	•	•		
Further p	roduct details

Qty. | Description

The suction interconnector is fitted with a strainer to prevent large particles from entering the pump. The suction interconnector is designed to comply with NEMA standards for motor mounting/dimensions.

Date:

Motor

The stator is hermetically encapsulated in stainless steel and the windings are embedded in polymer compound. This results in high mechanical stability, optimum cooling and reduces the risk of short circuits in the windings.

The shaft seal faces are ceramic/carbon. The material combination provides good dry-running resistance. Together with the shaft seal housing, the sand shield forms a labyrinth seal, which during normal operating conditions prevents penetration of sand particles into the shaft seal.

The motor is fitted with the Grundfos Tempcon temperature sensor device that includes a NTC-resistor which senses the temperature. The resistor is built-in close to the winding. The temperature is converted into a high-frequency signal which is sent via the submersible drop cable and which can be converted into a temperature reading by means of Grundfos MP204.

The MP204 is an electronic motor protection device that also monitors the supply network quality to protect the submersible motor against supply network disturbances.
