		MAGNA3 – More than a pump With its unrivalled efficiency, all-encompassing range and built-in communication capabilities plus functionalities replacing system components, the MAGNA3 is ideal for engineers and specifiers lo to create high-performance systems for buildings.					
	This pump in the Grundfos Master Class will fit both heating and cooling applications perfectly, it the obvious choice for almost any building project – old or new. The MAGNA3 is of the canned-rotor type, i.e. pump and motor form an integral unit without sha and with only two gaskets for sealing. The bearings are lubricated by the pumped liquid. The innovative clamp with only one screw enables easy repositioning of the pump head. The MAGNA3 is a pump with no maintenance requirements and with extremely low Life Cycle						
		The pump is characterised by the followir • controller integrated in the control box • control panel with TFT display on the co	ntrol box				
		 control box prepared for optional CIM m built-in differential-pressure and tempera cast-iron pump housing (depending on r carbon-fibre-reinforced composite rotor 	ature sensor nodel)				
		 stainless-steel bearing plate and rotor c aluminium alloy stator housing air-cooled power electronics 					
		The MAGNA3 is a single-phase pump.					
		Characteristic features • AUTOADAPT. • FLOWADAPT and FLOWLIMIT (more the valves).	nan a pump func	tion as it reduces the need for pump throttling			
		Proportional-pressure control.Constant-pressure control.					
		Constant-temperature control.Constant-curve duty.Max. or min. curve duty.					
		Automatic Night Setback.					
		No external motor protection required.Insulating shells supplied with single-he	ad pumps for he	ating systems.			
		 Large temperature range where the liqu of each other. 	id temperature a	nd the ambient temperature are independent			
		Communication The MAGNA3 enables communication via	a the following:				
		 wireless Grundfos GO Remote fieldbus communication via CIM module 	s				
		digital inputsrelay outputs					
		analog input (more than a pump function	n as heat energy	meter)

		Motor and electronic controller						
		The MAGNA3 incorporates a 4-pole synchronous, permanent-magnet motor (PM motor). This type is characterised by higher efficiency than a conventional asynchronous squirrel-cage mot						
		The pump speed is controlled by an integrated frequency converter.						
		A differential-pressure and temperature sensor is incorporated in the pump.
