ty.	Description				
1	TPED 65-340/2-S A-F-A-BQQE				
	Product No.: 99132832				
Single-stage, close-coupled, volute pump with in-line suction and discharge ports of identical diameter. is of the top-pull-out design, i.e. the power head (motor, pump head and impeller) can be removed for maintenance or service while the pump housing remains in the pipework.					
TPED 65-340/2-S A-F-A-BQQEThe pump is fitted with an unbalanced rubber bellows seal. TPED 65 A-F-A-BQQETPED 65-340/2-S A-F-A-BQQETPED 65-340/2-S A-F-A-BQQEThe shaft seal is accord 12756. Pipework connection is via PN 16 DIN flanges (EN 1092-2 and ISO 7005-2).					
	Pipework connection is via PN 16 DIN flanges (EN 10 The pump is fitted with a fan-cooled, permanent-mag IE5 in accordance with IEC 60034-30-2.				
	The motor includes a frequency converter and PI con variable control of the motor speed, which again enable	troller in the mo ples adaptation	tor terminal box. This enables continuously of the performance to a given requirement		
	The pump is fitted with a differential-pressure sensor.				
	Further product details The pump is suitable for applications requiring pressu transmitter registering the differential pressure across proportional-pressure control of the pump.	ure control. The sthe pump and	pump is fitted with a differential-pressure enabling constant pressure or		
	A control panel enables setting of required setpoint as "Stop". The control panel has indicator lights for "Ope	s well as setting eration" and "Fai	of pump to "Min." or "Max." operation or to ult".		
	Communication with the pump is possible by means of the Grundfos GO Remote (accessory). The remote enables further settings as well as reading out of a number of parameters such as "Actual value", "Speed input" and total "Power consumption".				
	The product's minimum efficiency index (MEI) is grea (EU) considered as an indicative benchmark for best- January 2013.				
	Pump Pump housing and pump head are electrocoated to in Electrocoating includes: 1) Alkaline-based cleaning.	mprove the corr	osion resistance.		
	 2) Pretreatment with zinc phosphate coating. 3) Cathodic electrocoating (epoxy). 4) Curing of paint film at 200-250 °C. 				

Date:

- 1: Pump housing
- 2: Impeller
- 3: Stub shaft
- 4: Pump head/motor stool
- 5: Wear rings

The pump housing is provided with a replaceable brass neck ring to reduce the amount of liquid running from the outlet side of the impeller to the inlet side. The impeller is secured to the shaft with a nut.

The pump is fitted with an unbalanced rubber bellows seal with torque transmission across the spring and around the bellows. Due to the bellows, the seal does not wear the shaft, and the axial movement is not prevented by deposits on the shaft.

Primary seal:

- Rotating seal ring material: silicon carbide (SiC)
- Stationary seat material: silicon carbide (SiC)

This material pairing is used where higher corrosion resistance is required. The high hardness of this material pairing offers good resistance against abrasive particles.

Secondary seal material: EPDM (ethylene-propylene rubber)

EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils.

A circulation of liquid through the duct of the air vent screw ensures lubrication and cooling of the shaft seal. The flanges have tappings for mounting of pressure gauges.

The motor stool forms connection between the pump housing and the motor, and is equipped with a manual air vent screw for venting of the pump housing and the shaft seal chamber. The sealing between motor stool and pump housing is an O-ring.

The central part of the motor stool is provided with guards for protection against the shaft and coupling. The pump shaft is fastened directly on the motor shaft with key and set screws.

Motor

The motor is a totally enclosed, fan-cooled motor with principal dimensions to IEC and DIN standards. Electrical tolerances comply with IEC 60034.

The motor is flange-mounted with free-hole flange (FF).

Motor-mounting designation in accordance with IEC 60034-7: IM B 5, IM V 1 (Code I) / IM 3001, IM 3011 (Code I).

The motor efficiency is classified as IE5 in accordance with IEC 60034-30-2.

The motor requires no external motor protection. The motor control unit incorporates protection against slow- and quick-rising temperatures, e.g. constant overload and stalled conditions.

TPED 65-340/2-S A-F-A-BQQEThe terminal box holds terminals for these connections:

- one dedicated digital input
- two analog inputs, 0(4)-20 mA, 0-5 V, 0-10 V, 0.5 3.5 V; the factory-fitted pressure sensor is connected to one of these inputs
- 5 V voltage supply to potentiometer and sensor
- one configurable digital input or open-collector output
